In assignment 6, I began adding functionality to the website, starting with creating the HTML/CSS for the shopping carts and adding functionality to the product details page.

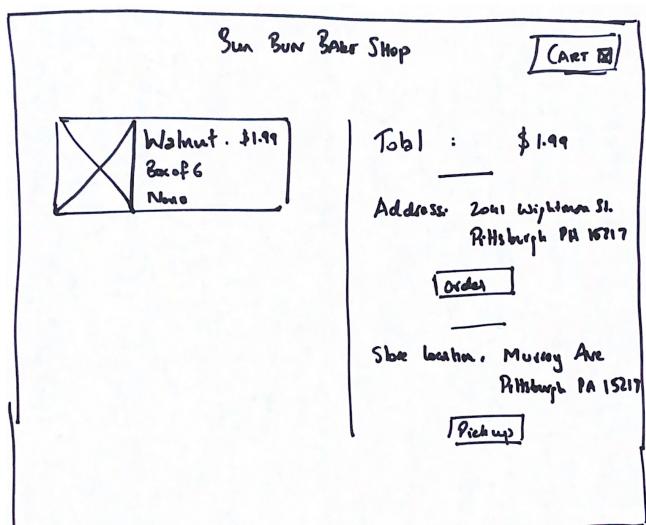

## The Shopping Cart

I designed a shopping cart for the paper prototypes/Figma clickable prototype and as part of assignment 6, built the shopping cart from scratch and added functionality to the mini pop-up on hover on the product details page.

The user can hover over the shopping cart icon on the main nav bar on the top to quickly view all the items in the cart at any point.

From here, the user can click to checkout and pay for the items.

In the shopping cart page, the user can view the total price, the shipping address, and phone number, and make changes to these details before paying for the products.
