High-fidelity Mockups

The following screens showcase the high fidelity mocks that were designed for the given requirements for the assignment.

The image shows two states of a shopping cart pop-up. On the left, the cart is not empty, displaying a list of items: "caramel pecan" with sub-options "Box of 6" and "Double Chocolate". It includes a small image of cinnamon rolls, a total price of "\$4.99", and a "Checkout" button. On the right, the cart is empty, showing a sad face icon and the text "cart is empty", with a "Reveal the rolls" button.

The pop-up has two states, empty and added.

The image shows a product details page for "blackberry" cinnamon rolls. It features a large image of the rolls, a brief description, allergen information (Milk, Soy, Eggs), and dropdown menus for "Pick a glazing" (Box of 6) and "Pick a box" (Vanilla-milk). At the bottom, it shows a total of "Total: \$0.00" and a "Remove" button. A shopping cart icon in the top right corner has a red notification bubble with the number "2", indicating items in the cart. An overlay window titled "Items in cart" lists the current items: "caramel pecan" and "blackberry".

On the product details pages, the user can get a peek into the cart by hovering over the cart icon.

The reason I added a hover state is to enable the user to quickly view, edit, and add more rolls without having to go into the shipping cart and then back to the list of products each time.

The image shows a shopping cart page. It lists items: "Caramel Pecan" and "Blackberry", each with a remove button. The total price is "Total: \$4.99". Below this, there's a section for "Address" with fields for "Address: 2041 Wightman St Pittsburgh PA 15217" and a "Change" link. There's also a "Phone:" field with the number "+1 (412) 519-3097" and a "Place Order" button. The page footer includes store hours (Monday - Saturday 9AM - 8PM), store address (412.123.4567), and social media links (Facebook, LinkedIn, Twitter, Instagram).

By clicking on the cart icon or clicking on checkout, the user is taken to the shopping cart page where the user sees all details and the chosen products.

All information is conveniently shown on the same page so the user can simply make all the changes required and make the payment without any more clicks on the interface.
